AcumenSoftware

Intelligence-based Future Risk Monitoring Software

Dynamic Monitoring of Environment Risk Factors
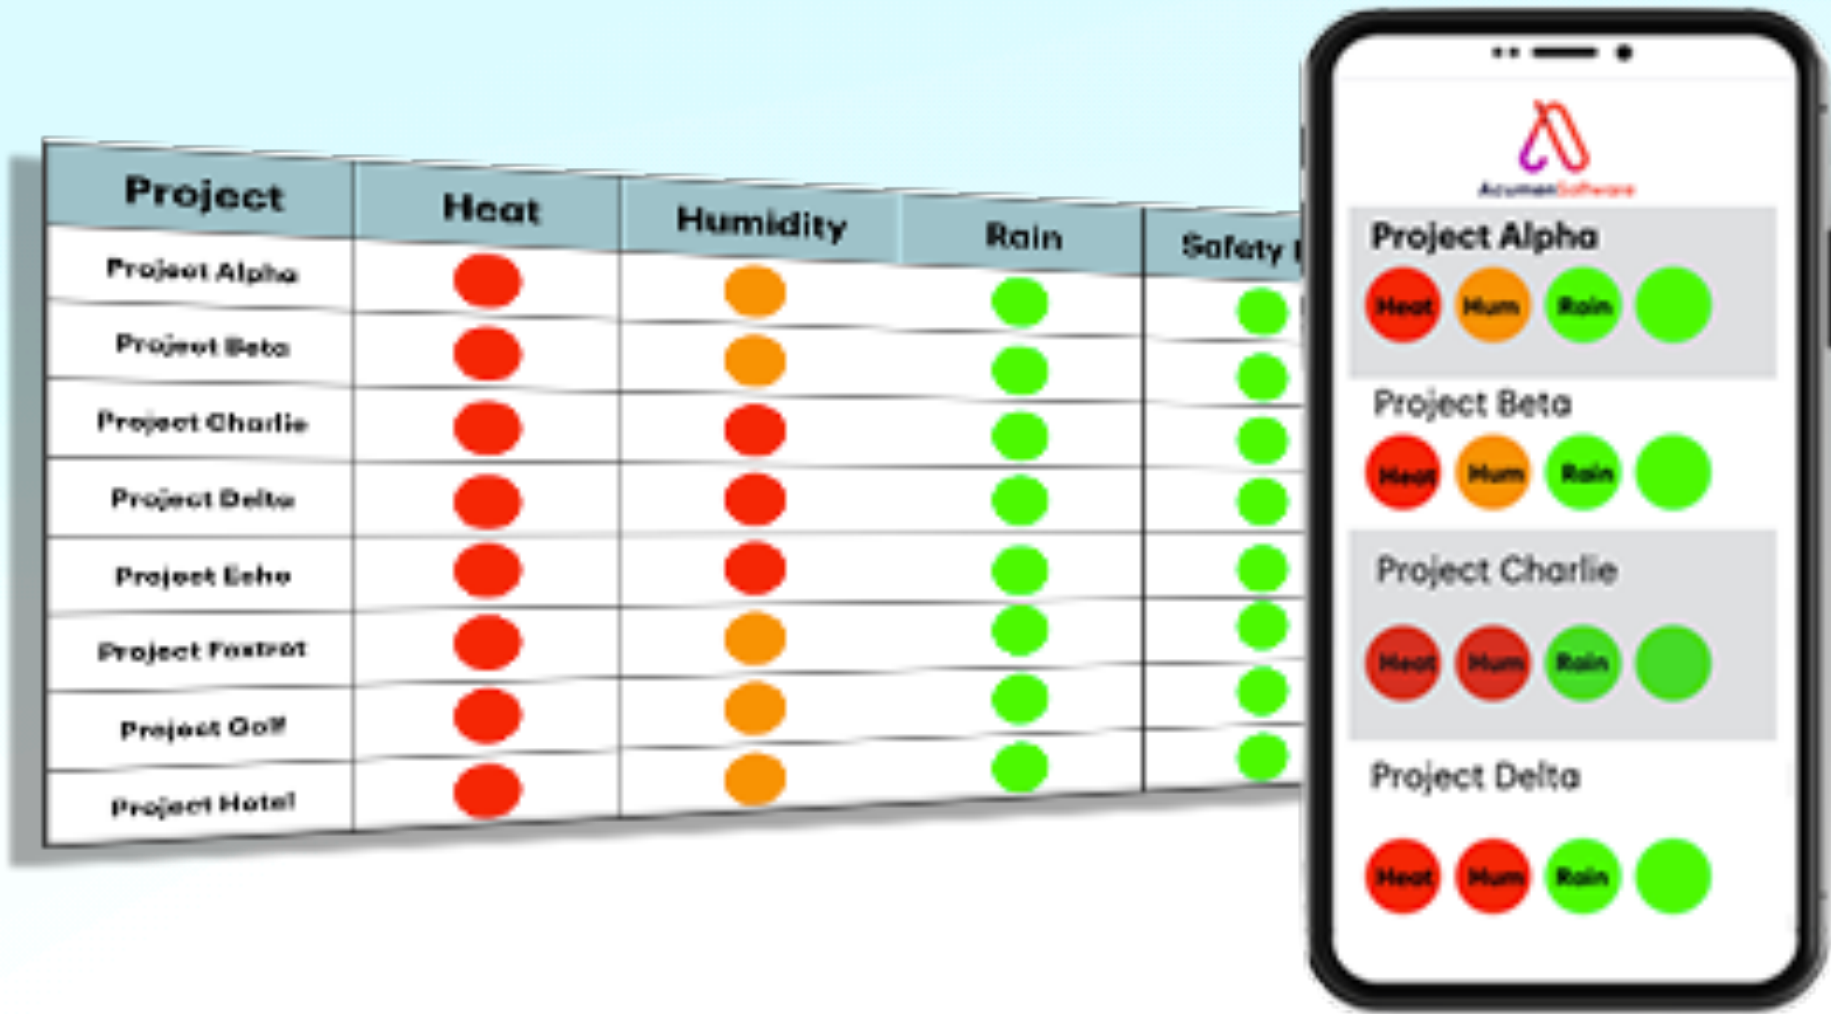

Controlling and mitigating environmental risks is critical to keeping your workforce safe.

Acumen's Environment Risk Monitoring Software will give you the power to mitigate future risks and keep your projects on track.

Utilising local data feeds, consolidated global weather services and third party application interfaces, Acumen gives you the insight you need through dynamic dashboards and RAG reporting.

| Heat | Rain | Humidity |
| Dust & Sand | Pressure Monitors | HSE Feeds |

Everything you need for Avoid Future Risk

✓ Dynamic Dashboards.

✓ Real-time data feeds from any source.

✓ Web and mobile optimised.

✓ Customisable for your parameters and risk variables.

✓ AI predictive risk avoidance.

✓ RAG, compliance and parameter controls for your business.

Out of the Box & Ready to Go in Minutes

The Acumen Environment Safety Monitoring Software will allow you to control exactly how you want to manage your future risk.

The baseline software comes straight out of the box with full integration into weather service APIs that can be fully configured to allow you to control exactly what risk factors you want to be aware off - including predictive, actual, feels like and much more…

With our intuitive web interface you can configure your data feeds as global, regional or even granular latitude and longitude location aware.
